

### **Blinders Off**

When adjusted to show what's in the blind spot (fig. 1), the outside mirror no longer shows the driver's car (blue). Adjusted in the traditional manner (fig. 2), the mirror clearly shows the driver's car while the red car disappears.

### **Visible World**

When pointed toward the blind spot (fig. 4), the outside mirror shows the green car as soon as it leaves the inside mirror (fig. 3). In the traditional adjustment (fig. 5), the outside mirror reflects some of what is also in the inside mirror (fig. 3).
